WEARABLE TV WRISTWATCH T.V LCD TFT 1.5inch

[005]

The Wristwatch Television enables TV viewing on the go.

- # The digital display shows the time and date with a clear 280 x 220 resolution picture on its 1-1/2" color screen.
- # The display relies on TFT (Thin Film Transistor) technology: a sandwich-like structure with liquid crystals between two specially constructed glass plates. The result is a high-resolution digital picture superior to that of traditional televisions.
- # With a worlds smallest TV tuner(NTSC*) made by Sony and headphone antenna, you'll get an amazing clear picture.
- # Volume and channel buttons are placed on the side of the watch; the time, desired channel and volume appear in the top LCD.
- # Receives both UHF and VHF channels.

* NTSC tuners are compatible with broadcasts in most of North and South America, Japan, and South Korea.

Available Channels:

VHF: 1~12ch / UHF 13~62ch

Channel Tuner

SONY PLL synthesizer tuner (auto/manual format)

Sound format

Monoural

Antenna

Earphone Antenna

Input

Charge connection terminal
